PROFESSIONAL SUMMARY

Self-taught Full Stack Developer — learned by building, not studying. Over the past year, designed and shipped a complete e-commerce platform from scratch: data models, payment integration, admin tooling, and a coupon/wallet engine, all without a co-developer or mentor. Every skill on this resume was acquired by reading docs, hitting errors, and fixing them. Currently adding Docker, Redis, and AWS to the stack.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), SQL, HTML5, CSS3, C

Frameworks & Libraries: Django, React.js, Bootstrap, Django REST Framework

Databases: PostgreSQL, MongoDB

Auth & APIs: Session-based Auth, JWT, RESTful API Design, Razorpay Payment Gateway

Tools & Platforms: Git, GitHub, VS Code, Postman, Figma, Linux CLI

Currently Learning: Docker, AWS (EC2/S3), Redis, pytest, CI/CD basics

Concepts: OOP, SOLID Principles, MVC/MVT Architecture, CRUD, Responsive Design

EXPERIENCE

Full Stack Developer | Self-Directed Learning (Brototype Program), Kochi

August 2024 – Present

No instructor, no guided curriculum. Picked a goal, read the docs, and built until it worked.

- Independently built 2 full-stack applications from blank repo to working product — writing the Django backend, designing the DB schema, building the React frontend, and wiring them together without guidance.
- Scoped, designed, and shipped LUELEE Clothing solo in under 2 months — a working store with product catalog, cart, order tracking, coupon engine, wallet system, and admin dashboard.
- Integrated Razorpay from scratch: reading API docs, handling webhook callbacks, managing order state transitions, and locking down CSRF and session security — first external API integrated independently.
- Built every UI component manually in React — no component libraries beyond Bootstrap — resulting in pixel-consistent layouts across mobile, tablet, and desktop.
- Structured Django apps using SOLID principles and fat-model/thin-view patterns — keeping views under 30 lines and business logic in service layers for easier testing and extension.

PROJECTS

LUELEE Clothing — E-Commerce Platform

Dec 2024 – Jan 2025 | Stack: Python, Django, PostgreSQL, JavaScript, Bootstrap, Razorpay API

- Sole developer across the entire stack — from ER diagram and Django models to Razorpay webhooks — shipped in ~6 weeks.
- Implemented payment flow with 3 order states (pending → paid → failed), webhook-driven status updates, and automatic retry on failure — zero manual order reconciliation needed.
- Designed a 5-table normalized PostgreSQL schema (users, products, orders, coupons, wallet) and used `select_related/prefetch_related` to eliminate N+1 query patterns on product listing pages.
- Built a custom Django admin dashboard — bypassing the default admin — with inventory controls, per-order status overrides, and a sales summary view across 50+ test SKUs.
- Built a coupon engine supporting percentage and flat discounts with per-user usage limits, and a wallet ledger that logs every credit/debit event — both implemented without a third-party package.
